

Water-based defoamer

RD-6993

Characteristics and advantages:

RP-6993 is a water-based and highly efficient defoamer with excellent miscibility. It can improve the leveling property and eliminate large and microbubbles in various water-based application systems. It is suitable for water-based industrial varnish, water-based wood varnish and water-based automotive paint.

1. It can eliminate large blisters caused by thick coating
2. It can eliminate microbubbles
3. Suitable for spraying
4. Applicable to high-viscosity systems

Product parameters:

Appearance	Turbid liquid
Valid copy	100%
Chemical composition	Organosiloxane copolymer

Application field:

Brush coating/roller coating, airless spraying, compressed air spraying, flexographic/gravure printing, dip coating, flow coating, shower coating, self-leveling

Recommended dosage:

0.1% -0.5% for the total formula in the form of supply

Usage method:

It can be pre-diluted or directly added to the coating in the supplied form

Packaging:

25KG/ plastic drum; 200KG per iron drum

Storage:

Store in the unopened original packaging and use within 12 months
